2nd ICETD 2013
The Second International Conference
On Engineering And Technology Development

28 -30 January 2013
Bandar Lampung University (UBL)
Lampung, Indonesia

PROCEEDINGS

Organized by:

Faculty of Computer Science and Faculty of Engineering
Bandar Lampung University (UBL)
Jl. Zainal Abidin Pagar Alam No.89 Labuhan Ratu, Bandar Lampung, Indonesia
Phone: +62 721 36 666 25, Fax: +62 721 701 467
website :www.ubl.ac.id
PREFACE

The Activities of the International Conference is in line and very appropriate with the vision and mission of Bandar Lampung University (UBL) to promote training and education as well as research in these areas.

On behalf of the Second International Conference on Engineering and Technology Development (2nd ICETD 2013) organizing committee, we are very pleased with the very good response especially from the keynote speaker and from the participants. It is noteworthy to point out that about 80 technical papers were received for this conference.

The participants of the conference come from many well known universities, among others: University Kebangsaan Malaysia – Malaysia, APTIKOM – Indonesia, Institut Teknologi sepuluh November – Indonesia, Surya Institute – Indonesia, International Islamic University – Malaysia, STMIK Mitra Lampung – lampung, Bandung Institut of Technology – Bandung, Lecture of The Malahayati University, B2TP – BPPT Researcher – lampung, Starch Technology Center – Lampung, Universitas Islam Indonesia – Indonesia, Politeknik Negeri Malang – Malang, University of Kitakyushu – Japan, Gadjah Mada University – Indonesia, Universitas Malahayati – Lampung, Lampung University – lampung, Starch Technology Center – Lampung, Universitas Riau – Riau, Hasanuddin University – Indonesia, Diponegoro University – Indonesia, King Abdulaziz University – Saudi Arabia, Parahyangan Catholic University – Indonesia, National Taiwan University – Taiwan, Surakarta Christian University – Indonesia, Sugijapranata Catholic University – Indonesia, Semarang University – Indonesia, University of Brawijaya – Indonesia, PPKIA Tarakanita Rahmawati – Indonesia, Kyushu University, Fukuoka – Japan, Science and Technology Beijing – China, Institut Teknologi Sepuluh Nopember – Surabaya, Researcher of Starch Technology Center, Universitas Muhammadiyah Metro – Metro, National University of Malaysia – Malaysia.

I would like to express my deepest gratitude to the International Advisory Board members, sponsor and also to all keynote speakers and all participants. I am also grateful to all organizing committee and all of the reviewers who contribute to the high standard of the conference. Also I would like to express my deepest gratitude to the Rector of Bandar Lampung University (UBL) who give us endless support to these activities, so that the conference can be administrated on time.

Bandar Lampung, 29 August 2013-08-26

Mustofa Usman, Ph.D
2nd ICETD Chairman
PROCEEDINGS

2nd ICETD 2013
The Second International Conference
On Engineering And Technology Development

28 - 30 January 2013

Table Of Content

Organizing Committee ......................................................................................... i
Table Of Content ................................................................................................. v

Keynote Speaker

1. Recent Advances in Biofuel Cell and Emerging Hybrid System
   **Abdul Aziz Ahmad and Raihan Othman** .......................................................... 1

2. Waste Utilization Study Tailing Gold Mine in Way Linggo-Lampung, as Fine Aggregate Materials for Producing Mortar Materials based on concept of Green Technology
   **Lilies Widojoko & Susilawati** ........................................................................ 8

3. Infrastructure Health Monitoring System (SHM) Development, a Necessity for Maintance and Investigation
   **Prof. Dr. Priyo Suprobo, Faimun, Arie Febry** ................................................ 17

4. Four Phases Quality Function Deployment (Qfd) By Considering Kano Concept, Time And Manufacturing Cost
   **Prof. Dr. Moses L Singgih, Dyah L. Trenggonowati, Putu D. Karningsih** .... 22
### Speaker

1. Comparative Analysis for The Multi Period Degree Minimum Spanning Tree Problem  
   **Wamiliana, Amanto, and Mustofa Usman**

2. Choosing The Right Software In Supporting The Successful of Enterprise ERP Implementation  
   **Yodhie Yuniarthe, Idris Asmuni**

3. Climate Adaptive Technology In Maintaining Vernacularism Of Urban Kampong  
   Case study: KampungAdat (Indiginous) Mahmud, Bandung District,West Java  
   **Marcus Gartiwa**

4. The Prospect Of Diesohol In Facing Fossil Fuel Crissis  
   **M.C. Tri Atmodjo**

5. The Potential Of Agriculture And Forestry Biomass Wastes As Source Of Bioenergy  
   **Hardoyo**

6. The Importance of Education Facility as Sustainable Urban Generation Tool  
   **Fritz Akhmad Nuzir, Haris Murwadi and Bart Julien Dewancker**

7. The implementation of Secton Method for Solving Systems of Non Linear Equations  
   **Nur Rokhman**

8. Quality Control Analysis Into Decrease The Level Defects On Coffee Product  
   **Hери Wibowo, Sulastri and Emy Khikmawati**

9. Public Transportion Crisis In Bandar Lampung  
   **Ida Bagus Ilham Malik**

10. Geospatial Analysis of Land Use Change in Way Kuripan Watershed, Bandar Lampung City  
    **Candra Hakim Van Rafi‘i1., Dyah Indriana Kusumastuti2., Dwi Jokowinarno**

11. Material Utilization Technology Of Agriculture And Forestry Waste  
    **Hardoyo**

12. The Supply Chain System Of Cassava On The Tapioca Industry  
    **Hardoyo**

13. Glass Technology In Natural Light Glasses On Aperture Element In The Architecture World  
    **Muhammad Rija & MT Pedia Aldy**

Yasser, Herman Parung, M. Wihardi Tjaronge, Rudy Djamaluddin.............................................................................. 167

22. The Research Of Slow Release Nitrogen Fertilizer Applied In Sugarcane (Saccharum Officinarum) For Green Energy Bioethanol  
M.C. Tri Atmodjo, Agus Eko T. Nurul Rusdi, Sigit Setiadi, and Rina........................................ 179

23. Energy Utilization Technology Of Agriculture And Forestry Waste  
Hardoyo ............................................................................................................................................... 185

24. Implementation Of Fuzzy Inference System With Tsukamoto Method For Study Programme Selection  
Fenty Ariani and Robby Yuli Endra. .......................................................................................... 189

25. The Analysis of Video Conference With ITU Standardization (International Telecommunication Union) That Joining in Inherent At Bandar Lampung University  
Maria Shusanti F, Happy Reksa .............................................................................................. 201
26. The E-internal audit iso 9001:2008 based on accreditation form assessment matrix in study program for effectiveness of monitoring accreditation
   Marzuki, Maria Shusanti F. ................................................................. 207

27. The Developing Of e-Consultations For Effectiveness of Mentoring Academy
   Ahmad Cucus, Endang K ................................................................. 214

28. The Evaluation of information system performance in higher education case study with EUCS model at bandar lampung university
   Reni Nursyanti, Erlangga. ................................................................. 221

29. The Analysis Of History Collection System Based On AndroidSmartphone With Qr Code Using Qr CodeCase Study: Museum Lampung
   Usman Rizal, Wiwin Susanty, Sutrisno .......................................... 230

30. Application of Complaint Handling by Approach Model of ISO 10002 : 2004 to Increase Complaint Services
   Agus Sukoco and Yuthsi Aprilinda. ................................................. 235

31. Towards Indonesian Cloud Campus
   Taqwan Thamrin, Ing Lukman, Dina Ika Wahyuningsih ........................ 252

32. Bridging Router to ADSL Modem for Stability Network Connection
   Arnes Yuli Vandika and Ruri Koesliandana ...................................... 257

33. The Effect of Use Styrofoam for Flexural Characteristics of Reinforced Concrete Beams
   Yasser, Herman Parung, M. Wihardi Tjaronge, Rudy Djamiluddin ...... 261

34. The Estimation Of Bioethanol Yield From Some Cassava Variety
   M.C. Tri Atmodjo ................................................................. 273

35. Effect of Superficial Velocity of Pressure Difference on The Separation of Oil And Water by Using The T-Pipe Junction
   Kms. Ridhuan and Indarto ............................................................. 277

36. The use of CRM for Customer Management at Cellular Telecommunications Industry
   Ayu Kartika Puspa ................................................................. 293

37. Indonesian Puslit (Centre Of IT Solution) Website Analysis Using Webqual For Measuring Website Quality
   Maria Shusanti Febrianti and Nurhayati ...................................... 297

38. The E-internal audit iso 9001:2008 based on accreditation form assessment matrix in study program for effectiveness of monitoring accreditation
   Marzuki, Maria Shusanti F. ............................................................. 307
   Agus Sukoco ........................................................................................................ 320

40. Value Analysis Of Passenger Car Equivalent Motorcycle (Case Study Kartini Road Bandar Lampung)  
   Juniardi, Aflah Efendi .......................................................................................... 337

41. Alternative Analysis Of Flood Control Downstream Of Way Sekampung River  
   Sugito, Maulana Febriansyah. ............................................................................. 347

42. Analysis Of Fitness Facilities And Effective Use Of Crossing Road  
   Juniardi, Edi Haryanto ....................................................................................... 353

43. Study On Regional Development Work Environment Panjang Port Lands In Support Bandar Lampung City As A Service And Trade  
   Ir. A. Karim Iksan, MT, Yohn Ferry. ................................................................. 359

44. Analytical And Experimental Study Bamboo Beam Concrete  
   Hery Riyanto, Sugito, Juli .................................................................................. 370

45. Comparative Analysis Of Load Factor Method Static And Dynamic Method (Case Study Akdp Bus Route Rajabasa - Bakauheni)  
   A. Ikhsan Karim, MT., Ahmad Zulkily. ............................................................. 378

46. Optimization Utilization Of Water Resourcesdam Batutegi Using Method Of Linear Program  
   Aprizal, Hery Fitriyansyah ................................................................................. 386

47. Characteristics Generation Traffic Patterns And Movement In Residential Area (Case Study Way Kandis Residential Bandar Lampung)  
   Fery Hendi Jaya, Juniardi, ............................................................................... 392

48. Use Study On Slight Beam Reinforced Concrete Floor Platein Lieu Of Scondary Beam  
   Hery Riyanto, Sugito, Lilies Widodjoko, Sjamsu Iskandar ............................... 399

49. Observation Of The Effect Of Static Magnetic Field 0.1 Mt On A-Amylase Activity In Legume Germination  
   Rochmah Agustrina, Tundjung T. Handayani, and Sumardi. ......................... 405

50. Effectiveness Analysis Of Applications Netsupport School 10 Based Iso / Iec 9126-4 Metrics Effectiveness  
   Ahmad Cucus, Nelcy Novelia ........................................................................... 413

51. Omparative Performance Analysis Of Banking For Implementing Internet Banking  
   Reza Kurniawan ............................................................................................... 418
The Developing Of e-Consultations For Effectiveness of Mentoring Academy

Ahmad Cucus, Endang Kusnadi
informatics engineering study program, computer science faculty, bandar lampung university
Za. Pagar Alam. St. No. 26 Labuhan Ratu Bandar Lampung, Indonesia

Abstract - e-Consultations is one of the technology trends that could not be separated from the internet, e-Consultations are an alternative media that can be used to the consultation, online consultation which would further be easier because not limited by time and place, but all of these activities can konultasi properly recorded and can be reused at any time. Seeing the advantages of e-Consultations so the authors try to apply it in the process of academic guidance contained within the campus, as an important tool, sometimes many academic coaching problems, such as meeting duration and schedule of meetings between students and lecturers, with the implementation of e-Consultations expected to assist students and faculty in academic mentoring activities.

Keyword: e-Consultations, academic guidance

Introductions

Process of teaching and learning activities in higher education in Indonesia contains many kinds of activities one of which is academic coaching, this activity is intended to develop skills for education students, student need direction and academic guidance, so they can finish their education well, and the media to consult if there are any problems in the subjects, that’s why we set a lecturer as academic advisor (PA) for a number of students. Academic supervisor was appointed lecturer by the head of the study program and he/she is given some task to guide some students who aim to help students complete the study as efficiently as possible in accordance with the conditions and potential of the individual student.

Students are required to meet the ideal achievement of credits each semester, so the time for studying can be finished on time. By the government rules as the implementation realization national education system that we called as administrator member (teachers, lecturers, tutors, facilitators) as mentors, trainers and facilitators (Miarso, 2004: 51) From this it can be clearly seen that the position of lecturer, where as a teacher, educator, and also as a mentor for the students. Especially, more and technical, it can be said as an academic supervisor for the student.

However, most of the intensity guidance the student and the supervisor is not running as it should be because of time, place, and students’ comfortable so they can share their problem maximally also include their personal in conducting guidance remains face (right) did not go well. whereas, in such a case is not expected by the students.

From the previous data of the previous observation obtained more than 60 percent of students feel less equally effective in the process of academic guidance. Due to various constraints such as poor communication, not being recorded material from the consultation and the consultation time and the limited duration of the meeting, the limited place to have a communication, because it is necessary to support media for academic mentoring process in an effort to increase the effectiveness of academic advising.

The Introduction of Online-consultations Online consultations or e-consultations refer to an exchange between government and citizens using the Internet. They are one form of online
deliberation. Further, online consultation consists in using the Internet to ask a group of people their opinion on one or more specific topics, allowing for trade-offs between participants. Generally, an agency consults a group of people to get their thoughts on an issue when a project or a policy is being developed or implemented, e.g. to identify or access options, or to evaluate ongoing activities. This enables governments to draft more citizen-centered policy.

As the Internet gains popularity with the public for voicing opinion, citizen participation in policy development through cyberspace is changing the face of democracy. The rise of the Internet has given way to buzzwords such as e-democracy, referring to citizen participation in politics, government issues and policy development through electronic technologies and the Internet, and eGovernment, pertaining to providing citizens with government information and services online. Online consultation is an extension of these concepts. Through online engagement, government is enabled to hold interactive dialogues with the public as they have a more direct route to citizen opinion via the Internet.

E-consultations constitute interactive “tell-us-what-you-think” online platforms where ordinary citizens, civic actors, experts, and politicians purposively assemble to provide input, deliberate, inform, and influence policy and decision making. Initiated by political institutions, non-state actors (or jointly), e-consultations vary in approach, goals, selection of target groups, breadth of themes or issue areas, in the use of technical tools and administrative level at which they are launched (Götzte 2001).

E-consultations are also more formal and structured than discussions in the informal virtual public sphere. They tend to have a set duration, agenda, employ the use of moderators, with topics for discussion pre-defined by the host. Given that it is government agencies that in most cases initiate e-consultations, relationships among participants are seen to be asymmetric where the actors involved – politicians, policy experts, citizens – differ in their level of authority, expertise and access to decision-making processes. Arguably, as it will be later discussed, these implicit structural dynamics distinctly influence the e-consultation process.

**Types of e-consultations**

There are five common types of e-consultations. The simplest involves question and answer discussion forums integrated within an existing government website. Here citizens are invited (by initiators) to post their views, questions and concerns, and receive feedback from respective authorities. Q & A forums can take place synchronously (in real time) or asynchronously with pre-moderation and lag time between responses where views posted are pre-read by a designated moderator. A good example of the synchronous kind are the

1. diskussionforen’ hosted by the German Bundestag1 or the ‘webchats series’ in the UK2 where a selected MP (or a group of) is pre-scheduled to interact with and directly answer questions posted by the public on-line.

2. *On-line polls* are the second type of e-consultations offering quick snapshots or measurements of civic temperature on a specific public issue.

3. *E-petitions* or on-line testimonies are another form of e-consultations which enable citizens, individually or in a group, to table issues, complaints or requests directly to the government.

4. *E-panels* are more sophisticated versions of on-line consultations. They invite a (self-selected or recruited) sample group of citizens – a panel – to provide and exchange their views via on-line discussion forums, online surveys, live chats, single polls or votes centered around a common topic or policy initiative.
Practical Benefits of E-Consultations

Being given the opportunity to provide feedback and to influence the political process outside the electoral cycle is a distinct feature of public consultations. But what is the value added of doing so on-line? Or in Bimber’s (1999) words, does the medium matter? The following section discusses some of the practical benefits as well as normative pretexts under which e-consultations are launched.

Convenience, expediency and flexibility
For government institutions, Internet promotes efficiency and effectiveness through the reduction of transactional costs (Tolbert and Mossberger, 2006). For ordinary citizens who have their own lives with multiple activities and responsibilities, the incentives for e-participation lie in the practical convenience of on-line communication.

Enhanced interactivity
Unlike traditional print and television media which act as one-way intermedialies of public catchallism, Internet applications enable multi-level (one-to-one, one-to-many, many-to-one) and more direct modes of communication.

Face-less interface
Virtual interactions are equally seen to accommodate different communication skills. By requiring face-less interface, written inputs rather than physical presence, on-line communication removes the ‘inhibiting effect’ of awkwardness and shyness that prevents some people from speaking in larger group contexts (Wallace, 1999; Dutton, 1996). Thus by eliminating certain communicative barriers, the on-line environment is seen to offer favorable incentives for deliberative discourse as well as for the participation of those who would otherwise be excluded.

Normative pretexts
In addition to their capacities to remove practical barriers to participation, e-consultations are guided by normative pursuits aimed at remedying some of the democratic deficits in status quo political processes.

Feedback and mutual learning
Closely linked to the first premise, e-consultations’ facilitation of public input and reciprocal feedback between the government and the governed is also assumed to enhance democratic legitimacy and better policies.

7.4.1 Deliberation
The third normative pursuit associates public consultations with deliberative democracy. Deliberation unlike other forms of discourse, proponents argue, catalyses the articulation of conflictual preferences within society motivated by discursive exchanges and genuine consensus formation based on moral, rational, practical judgement, mutual respect and social learning (Dryzek, 1990; Habermas 1984, 1991; Fishkin, 1991; Gutmann and Thomson, 2004).

Civic Education
In addition to offering conducive conditions for convenient and inclusive communication practices, e-consultations are also seen as opportunities for civic education.

Result
The design of UML e-Consultant
From this picture below is designed academic mentoring that will be formed, the system designed is formed by several system parts elements.
User Interface

Here are some views between user to interact with the system

1. Display Login and Register.

   ![Picture 4.2 Display register login and academic counselors Applications](image)

   This display is used to login for students, faculty, administrators, and registers for the students and lecturer who don’t have registered yet.

2. Students display form

   ![Picture 4.3 form student](image)

   For accessing this form, the students is asked to login first and only the students that allowed to enter this site. For the students who don’t register yet as the user, you can directly register by filling the registration form.

3. Display student guidance

   ![Picture 4.4 form student guidance](image)

   This display appears if students want to do guidance

4. Display lecturers form

   ![Picture 4.5 form a lecturer](image)

   To access this form lecturers are asked to login first and only the lecturers are allowed to enter the area form the lecturers. For lecturers who are not registered as a user can directly register by register first dahulu. The lecturers’
view who successfully login form shown in picture 4.4

6. Display Form Admin

Before entering the form admin, admin must log in first, after successful login will look like in figure 4.4. Here admin can look at student data, the lecturer’s data, student guidance and data and can remove the data.

Discussion

Output Analysis

This evaluation was conducted to determine how the process, the tool of guidance and the tool to determine whether the existing guidance on the computer science faculty has been running well, this test is applied using sampling random with 78 respondents from the students. In this case using pre-test and post-test to know the impact of apply e-consultations on the process of mentoring academic.

Pre Test (Prior to the adoption of e-Consultations)

1. Efficiency guidance

2. Willingness time guidance

3. The duration of the meeting in the academic advising process

4. Convenience and flexibility in presenting problems in academic advising
5. The need for other alternatives as a medium to deliver an opinion in academic activities

Post Test (after the application of e-Consultations)

After the program has been tested, the author do some evaluations to some respondents to know how the implementation of mentoring academic based on web and notification email and also to know whether guidance intensity between students and lecturers, is it increased or not in computer science faculty.

1. Efficiency guidance
2. Availability of time and convenience in implementing student academic guidance
3. Convenience and flexibility in using the expression e-Consultations
4. Media e-Consultations can help students and teachers in academic coaching activities

The Conclusion

Based on the results of the observation, which is begun from the observation phase to application design. Authors conclude that:
1. From the results of questionnaires Pre Test and Post Test so academic guidance application based on web and notification email can be concluded that it can increased the guidance intensity.

2. How to develop applications to facilitate the process between students with guidance counselors and determine the level of guidance intensity student in the Faculty of Computer Science University of Bandar Lampung using a web-based application of academic counselors and e-mail notification so that it can be used as a reference to improve student guidance intensity.

3. This academic guidance application based on web and notification email is only able to handle guidance activity between student and lecturer with using text mode, message.

4. Guidance with the application process using a web-based academic tutors and e-mail notifications can help the interaction between students and counselors so that we can help the process guidance is not limited to time and space.
